Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/Cha635/Personalized-Networking-Assistant
Programming Language(s)	Python
Framework(s) Used	FastAPI, Streamlit
Key Features Implemented	• Event theme extraction using DistilBERT • Personalized conversation starter generation using GPT-2 • Wikipedia-based fact verification • Streamlit web interface • FastAPI REST API backend • Custom networking dataset support
Pending / Incomplete Features	• Google Gemini API integration (future enhancement) • User authentication and profile management (future scope)
Setup / Run Instructions	1. Create and activate a Python virtual environment. 2. Install dependencies using: pip install -r requirements.txt 3. Configure environment variables in the .env file. 4. Start the FastAPI server: uvicorn main:app --reload 5. Launch the Streamlit application: streamlit run frontend/streamlit_app.py

Code Quality Checklist

S. No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The project successfully implements an AI-powered Personalized Networking Assistant using FastAPI, Streamlit, DistilBERT, GPT-2, and the Wikipedia API. The application generates personalized conversation starters based on networking event descriptions and verifies factual information. The modular architecture allows future enhancements such as Google Gemini integration and user profile management.
