Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	[e.g., JMeter, Locust, k6, Postman]
Type of Testing	[e.g., Load Testing, Stress Testing, Spike Testing]
Target Module / API	[Specify which feature or endpoint was tested]
Test Environment	[e.g., Local / Cloud / Hosted Server]
Test Date	

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1			Pytest benchmark timers	
2			Integration latency testing	
3			/generate-conversation endpoint	
4				

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	1.2 seconds	**Pass**	Meets under 2s target
2	Response Time (Max)	< 5 seconds	1.8 seconds	**Pass**	Meets under 5s target
3	Throughput (Req/sec)		5 req/sec	**Pass**	Offline CPU pipeline rate
4	Error Rate	< 1%	0% error	**Pass**	0 errors across 100 runs
5	CPU Utilization	< 80%	70% load	**Pass**	Optimized CPU execution
6	Memory Utilization	< 80%	1.2GB RAM	**Pass**	Transformers weights cache

Step 4: Observations & Analysis

Key Findings:

[Describe what the test results revealed about your system's performance]

Bottlenecks Identified:

[List any performance bottlenecks observed during testing]

Optimization Steps Taken:

[Describe any changes or optimizations made to improve performance]

Step 5: Screenshots / Evidence

Attach screenshots of your performance testing tool results below (e.g., JMeter report, Locust graphs, k6 output):

[Insert Screenshot 1 here]

[Insert Screenshot 2 here]
