

Solution Requirements

Date	15 March 2026
Team ID	Group 5 (AP24110011158)
Project Name	Personalized Networking Assistant
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	<i>ir</i>	
2	Authorization levels	Single local user mode; no multi-tenant roles required	
3	External interfaces		

		<i>services the system must connect to]</i>	
4	Transactions processing	<i>[Explain how data exchanges, payments, or core system transactions will be handled]</i>	
5	Reporting	Displays last 5 generated sessions in History UI	
6	Business rules, etc.	Event Analyzer (DistilBERT) theme extraction	
7	Compliance to laws or regulations	Adheres to local data storage privacy standards	
8	<i>Other</i>	<i>[Add any additional functional requirements here]</i>	

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria

1	Performance & Speed		<i>(e.g., Page loads in < 2 seconds)</i>
2	Scalability	Local model weights can scale by mounting volume cache	<i>(e.g., Supports up to 10,000 concurrent users)</i>
3	Security & Data Privacy	Logs session histories into locally encrypted file system	<i>(e.g., End-to-end AES-256 encryption)</i>
4	Reliability & Availability		<i>(e.g., 99.9% uptime per month)</i>
5	Usability & Accessibility	Streamlit clean layout, intuitive columns, readable card text	<i>(e.g., Complies with WCAG 2.1 AA standards)</i>
6	Other	<i>[Add any additional non-functional requirements (e.g., Maintainability, Portability)]</i>
