

Technology Stack

Date	15 March 2026
Team ID	Group 5 (AP24110011158)
Project Name	Personalized Networking Assistant
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side <i>(e.g., React, Angular, HTML/CSS)</i>	Streamlit (v1.38)	Rapid dashboard UI builder with built-in layout widgets & session state management.

2	Backend / Server-Side <i>(e.g., Node.js, Python/Django, Java)</i>	FastAPI (v0.115)	Exposes REST endpoints, validates inputs, and coordinates AI service layers.
3	Database / Data Storage <i>(e.g., MySQL, MongoDB, PostgreSQL)</i>	JSON Database	Lightweight file-system read/write logger for audit tables (history/feedback).
4	Cloud / Hosting / Deployment <i>(e.g., AWS, Azure, Heroku, Docker)</i>	Localhost	Runs on local desktop, eliminating cloud subscription costs.
5	Version Control & CI/CD	Git & Pytest	Track changes on branches and verify execution using automated unit tests.

	<i>(e.g., GitHub, GitLab, Jenkins)</i>		
6	Third-Party APIs / Other Tools <i>(e.g., Stripe, Twilio, Google Maps)</i>	Wikipedia REST	Queries reliable text summaries for quick fact verification.
