

Project Initialization and Planning Phase

Date	15 March 2024
Team ID	
Project Title	Personalized Networking Assistant
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposed project aims to simplify professional networking by using Artificial Intelligence and Natural Language Processing (NLP) to generate personalized conversation starters. The system analyzes event descriptions using DistilBERT, creates relevant conversation suggestions using GPT-2, and verifies factual information through the Wikipedia API. The application helps users prepare confidently for networking events while reducing social anxiety and improving communication.

Project Overview	
Objective	The primary objective is to assist users in preparing for networking events by automatically analyzing event themes, generating personalized conversation starters, and providing fact-verified discussion points using AI-based technologies.
Scope	The project focuses on AI-assisted networking preparation for conferences, seminars, workshops, career fairs, and professional events. It includes event theme extraction, conversation starter generation, and fact verification through an easy-to-use Streamlit web interface.
Problem Statement	
Description	Many students and professionals struggle to initiate meaningful conversations during networking events due to lack of preparation, confidence, and knowledge about relevant discussion topics. Existing solutions provide only generic advice and require significant manual effort.
Impact	The solution improves networking confidence, encourages meaningful professional interactions, reduces communication anxiety, and helps users establish valuable connections through personalized AI-generated conversation suggestions.
Proposed Solution	
Approach	Develop an AI-powered networking assistant using DistilBERT for event theme extraction, GPT-2 for personalized conversation starter generation, FastAPI for backend services, Streamlit for the user interface, and Wikipedia API for fact verification.

Key Features	➤ AI-based event theme extraction ➤ Personalized conversation starter generation ➤ Wikipedia-based fact verification ➤ Simple and interactive Streamlit interface ➤ FastAPI REST backend ➤ Uses Hugging Face Transformers ➤ Easy deployment and local execution

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU	Dual-Core or Quad-Core Processor
Memory	RAM	Minimum 8 GB (16 GB Recommended)
Storage	SSD/HDD	At least 10 GB free space
Software		
Frameworks	Backend & Frontend	FastAPI, Streamlit
Libraries	AI/NLP Libraries	Transformers, Torch, Wikipedia, Requests, python-dotenv
Development Environment	IDE	Visual Studio Code
Version Control	Source Code Management	Git & GitHub
Data		
Data	Dataset	Custom networking conversation dataset (CSV/JSON)
